Introduction

Hy		

< □ > < □ > < □ > < □ > < □ >

æ

Welcome to Hype for Types!

- Instructors:
 - Ari Battleman (zbattlem)
 - Kiera O'Flynn (koflynn)
 - Sonya Simkin (ssimkin)
 - Yosef Alsuhaibani (yalsuhai)
- Attendance
 - In general, you have to come to lecture to pass
 - Let us know if you need to miss a week
- Homework
 - Every lecture will have an associated homework
 - Graded on effort (not correctness)
 - If you spend more than an hour, please stop¹

¹Unless you're having fun!

Other Stuff

- Please join the Discord and Gradescope if you haven't
- We assume everyone has 150 level knowledge of functional programming and type systems
 - If you don't have this and feel really lost, talk to us after class (and a 150 head TA will bring you up to speed)

Motivation

Types are... hype!

Types are *descriptions* of how some piece of data can be used.

² Foreshadowing: "a literary device in which a writer gives an advance hint of what is to come later in the story." *Wikipedia, "Foreshadowing," retrieved 30 Aug* 2022

Hype for Types

Introduction and Lambda Calculus

Types are *descriptions* of how some piece of data can be used.

Guiding Question

How can we use types to catch errors at compile-time?

² Foreshadowing: "a literary device in which a writer gives an advance hint of what is to come later in the story." *Wikipedia, "Foreshadowing," retrieved 30 Aug* 2022

Types are *descriptions* of how some piece of data can be used.

Guiding Question

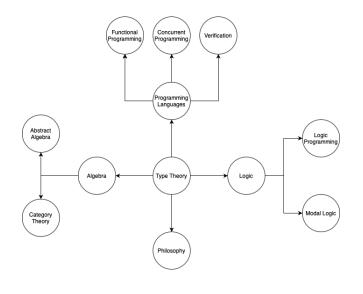

How can we use types to catch errors at compile-time?

Guiding Question

Can we use types for more than just bug-catching?²

² Foreshadowing: "a literary device in which a writer gives an advance hint of what is to come later in the story." *Wikipedia*, *"Foreshadowing*," *retrieved 30 Aug* 2022

Type Theory at Large

Goal of This Course

- We do not ask students to master the content as in an academic course
- We do not replace any academic courses
- We do not focus on depth, but rather focus on breath

Goal of This Course

- We do not ask students to master the content as in an academic course
- We do not replace any academic courses
- We do not focus on depth, but rather focus on breath
- We DO expect you to have fun
- We DO hope to spark your interest in PL theory and start pursuing coursework and/or research in adjacent areas after taking this course
- We DO want you to learn about different fascinating aspects of types that you would otherwise take advanced courses and/or read complicated academic papers to understand

Course Credit

- 3 unit, P/F
- For undergraduate, count towards 360 total units graduation requirement
- For MSCS, count towards 12 units "MSCS elective units"

э

You will see a lot of weird symbols in this class, please don't be intimated. We especially love λ .

Building a tiny language

The *simply-typed lambda calculus* is simple. It only has four features³:

- Unit ("empty tuples")
- Booleans
- Tuples
- Functions

³which is a subset of Standard ML

13/23

Building a tiny language

The *simply-typed lambda calculus* is simple. It only has four features³:

- Unit ("empty tuples")
- Booleans
- Tuples
- Functions

Goal

To use STLC as a tool to study how type checker works.

³which is a subset of Standard ML

Expressions

е

We represent our expressions using a grammar:

e ::=	X	variable
	$\langle \rangle$	unit
	false	false boolean
	true	true boolean
	if e_1 then e_2 else e_3	boolean case analysis
	$\langle e_1, e_2 \rangle$	tuple
	fst(e)	first tuple element
	snd(e)	second tuple element
	λx : $ au$. e	function abstraction (lambda)
	$e_1 e_2$	function application

æ

Types

Similarly, we define our types as follows:

$$\begin{array}{rrrr} \tau & ::= & \textbf{unit} \\ & \mid & \textbf{bool} \\ & \mid & \tau_1 \times \tau_2 \\ & \mid & \tau_1 \to \tau_2 \end{array}$$

イロト イボト イヨト イヨト

3

Types

Similarly, we define our types as follows:

$$\begin{array}{rrrr} \tau & ::= & \textbf{unit} \\ & \mid & \textbf{bool} \\ & \mid & \tau_1 \times \tau_2 \\ & \mid & \tau_1 \to \tau_2 \end{array}$$

Million-dollar Question

How do we check if $e : \tau$?

< 4³ ► <

э

Inference Rules

In logic, we use *inference rules* to state how facts follow from other facts.

 $\frac{\mathsf{premise}_1 \quad \mathsf{premise}_2 \quad \dots}{\mathsf{conclusion}}$

3

16/23

Inference Rules

In logic, we use *inference rules* to state how facts follow from other facts.

 $\frac{\text{premise}_1 \quad \text{premise}_2 \quad \dots}{\text{conclusion}}$

For example:

it

you are here you a	re hyped			
you are hyped for	types	funct	ions are values	
t's raining x is outside	Socra	tes is a man	All men are r	nortal
x is getting wet		Socrates	s is mortal	
<i>n</i> is a number	•	f total	x valuable	
$\overline{n+1}$ is a numb	ber	f x va	aluable	
		4 🗆		

Typing Rules: First Attempt

Consider the judgement $e : \tau$ ("e has type τ "). Let's try to express some simple typing rules.

			e_1 : bool e_2 : τ e_3 : τ
$\langle angle$: unit	false : bool	true : bool	if e_1 then e_2 else e_3 : τ
e_1	: $\tau_1 e_2 : \tau_2$	$e: au_1 imes au_2$	$e: au_1 imes au_2$
$\langle e_1 \rangle$	$,e_2 angle$: $ au_1 imes au_2$	$\overline{fst(e)}$: $ au_1$	$\overline{snd(e)}$: $ au_2$

3

Typing Rules: First Attempt

Consider the judgement $e : \tau$ ("e has type τ "). Let's try to express some simple typing rules.

$\overline{\langle angle : unit}$	false : bool	true : bool	$\frac{e_1: \text{bool} e_2: \tau e_3: \tau}{\text{if } e_1 \text{ then } e_2 \text{ else } e_3: \tau}$
e_1	: $\tau_1 e_2 : \tau_2$	$e: au_1 imes au_2$	$e: au_1 imes au_2$
$\langle e_1 \rangle$	$, e_2 \rangle : \tau_1 \times \tau_2$	$\overline{fst(e)}$: $ au_1$	$\overline{snd(e)}$: $ au_2$

Question

How do we write rules for functions?

	for	

3

Typing Rules: Functions

Let's give it a shot.

 $e_1 e_2 : \tau_2$

Looks good so far...

э

18/23

イロト 不得 トイヨト イヨト

Typing Rules: Functions

Let's give it a shot.

$$e_1:\tau_1\to\tau_2\quad e_2:\tau_1$$

 $e_1 e_2 : \tau_2$

Looks good so far...

 $\frac{e:\tau_2(?)}{(\lambda x:\tau_1.\ e):\tau_1\to\tau_2}$

	Types

< 47 ▶

글 에 에 글 어

3

Typing Rules: Functions

Let's give it a shot.

$$e_1: \tau_1 \rightarrow \tau_2 \quad e_2: \tau_1$$

 $e_1 e_2 : \tau_2$

Looks good so far...

 $\frac{e:\tau_2(?)}{(\lambda x:\tau_1.\ e):\tau_1\to\tau_2}$

Key Idea

Expressions only have types given a context!

ype		

く 目 ト く ヨ ト く ヨ ト

3

Contexts

Intuition

If, given
$$x : \tau_1$$
, we know $e : \tau_2$, then $(\lambda x : \tau_1. e) : \tau_1 \rightarrow \tau_2$.

Therefore, we need a context (denoted Γ) which associates types with variables.

$$\frac{\Gamma, x: \tau_1 \vdash e: \tau_2}{\Gamma \vdash (\lambda x: \tau_1. \ e): \tau_1 \rightarrow \tau_2}$$

What types does some variable x have? It depends on the previous code!

$$\frac{x:\tau\in\Gamma}{\Gamma\vdash x:\tau}$$

Hyp		

э

All the rules!

 $\frac{\mathbf{x}:\tau\in\mathsf{\Gamma}}{\mathsf{\Gamma}\vdash\mathbf{x}\cdot\tau}\;(\mathrm{VAR})$ $\frac{1}{\Gamma \vdash \mathsf{false} : \mathsf{bool}} (\text{FALSE})$ $\overline{\Gamma \vdash \langle \rangle}$: **unit** (UNIT) $\frac{\Gamma \vdash e_1 : \mathbf{bool} \quad \Gamma \vdash e_2 : \tau \quad \Gamma \vdash e_3 : \tau}{\Gamma \vdash \mathbf{if} \ e_1 \ \mathbf{then} \ e_2 \ \mathbf{else} \ e_3 : \tau} (IF)$ $\overline{\Gamma \vdash true : bool}$ (TRUE) $\frac{\Gamma \vdash e_1 : \tau_1 \quad \Gamma \vdash e_2 : \tau_2}{\Gamma \vdash \langle e_1, e_2 \rangle : \tau_1 \times \tau_2}$ (TUP) $\frac{\Gamma \vdash e : \tau_1 \times \tau_2}{\Gamma \vdash \mathsf{fst}(e) : \tau_1}$ (FST) $\Gamma \vdash \rho \cdot \tau_1 \times \tau_2$ $\Gamma \mathbf{v} \cdot \tau_1 \vdash \mathbf{\rho} \cdot \tau_2$

$$\frac{\Gamma + \mathbf{snd}(\mathbf{e}) : \tau_2}{\Gamma \vdash \mathbf{snd}(\mathbf{e}) : \tau_2} \text{ (SND)} \qquad \frac{\Gamma + (\lambda x : \tau_1 \cdot \mathbf{e}) : \tau_2}{\Gamma \vdash (\lambda x : \tau_1 \cdot \mathbf{e}) : \tau_1 \to \tau_2} \text{ (ABS)}$$

$$\frac{\Gamma \vdash e_1 : \tau_1 \to \tau_2 \quad \Gamma \vdash e_2 : \tau_1}{\Gamma \vdash e_1 \; e_2 : \tau_2} \; (\text{APP})$$

Example: what's the type?

Let's derive that

```
\cdot \vdash (\lambda x : unit. \langle x, true \rangle) \langle \rangle : unit \times bool
```

by using the rules.

< 円

э

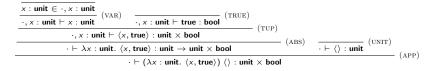

21/23

Example: what's the type?

Let's derive that

 $\cdot \vdash (\lambda x : \mathsf{unit.} \langle x, \mathsf{true} \rangle) \langle \rangle : \mathsf{unit} \times \mathsf{bool}$

by using the rules.

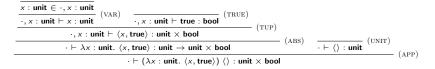

4 E b

Example: what's the type?

Let's derive that

 $\cdot \vdash (\lambda x : \mathsf{unit.} \langle x, \mathsf{true} \rangle) \langle \rangle : \mathsf{unit} \times \mathsf{bool}$

by using the rules.

Homework Foreshadowing

That looks like a trace of a typechecking algorithm!

ype		

・ 同 ト ・ ヨ ト ・ ヨ ト

Get Hype.

3

The Future is Bright

- How can you use basic algebra to manipulate types?
- How do types and programs relate to logical proofs?
- How can we automatically fold (and unfold) any recursive type?
- How can types allow us to do safe imperative programming?
- Can we make it so that programs that typecheck iff they're correct?
