## CPS, but at the type level?

# CPS, but at the type level?

#### Goal

Replace type int -> 'a with a jump point expecting an int.

# Conveniently, SML <> SML/NJ

```
signature CONT =
 sig
   type 'a cont
   val letcc : ('a cont -> 'a) -> 'a
   val throw: 'a cont -> 'a -> 'b
   val catch : ('a -> void) -> 'a cont
 end
structure K :> CONT =
  struct
    type 'a cont = 'a SMLofNJ.Cont.cont
   val letcc = SMLofNJ.Cont.callcc (* return *)
   val throw = SMLofNJ.Cont.throw
   val catch = fn f =>
                   letcc (absurd o f o letcc o throw)
  end
```

#### Some Rules

$$\frac{\Gamma, k : \tau \ \mathsf{cont} \vdash e : \tau}{\Gamma \vdash \mathsf{letcc} \ k \ \mathsf{in} \ e : \tau}$$

$$\frac{\Gamma \vdash k : \tau \text{ cont } \Gamma \vdash e : \tau}{\Gamma \vdash \text{throw } k e : \tau'}$$

## CPS, but at the type level!

We replace the int -> 'a continuation with a jumppoint of type int cont:

## CPS, but at the type level!

We replace the int -> 'a continuation with a jumppoint of type int cont:

We can also implement it tail-recursively using the helper catch:

## CPS, but at the type level!

We replace the int -> 'a continuation with a jumppoint of type int cont:

We can also implement it tail-recursively using the helper catch:

```
- letcc (fn k => absurd (prod [1,2,3] k));
val it = 6 : int
```

←□▶←□▶←□▶←□▶
□▶←□▶←□▶

```
(* sum : int list -> (int, int * int cont) either *)
(* sum [2, 1, 5] ==> INL 8 *)
(* sum [2, ~2, 5] ==> INR (~2,K) *)
```

```
(* sum : int list -> (int, int * int cont) either *)
(* sum [2, 1, 5] ==> INL 8

# Finally a proof of $A \vee \neg A$

Devil: I have an offer for you. Either I give you a ton of gold, or you give me a ton of gold and I will make you the instructor of H4T.

# Finally a proof of $A \vee \neg A$

We prove  $P \vee \neg P$  by proving  $\neg P$ . If you believe me, then we are done. If you don't believe me, then you need to give a counter proof, a.k.a a proof of P. Then we  $P \vee \neg P$  by proving P.

# Finally a proof of $A \vee \neg A$

### Important Idea

Continuations correspond to classical logic!

Now  $\neg A \triangleq$  'a cont instead of  $\neg A \triangleq$  'a -> void. We'll provide the helper val catch : ('a -> void) -> 'a cont<sup>1</sup>

$$A \vee \neg A$$

$$\neg \neg A \supset A$$

$$\neg (A \land B) \supset \neg A \lor \neg B$$

$$\neg (A \land \neg B) \supset A \supset B$$

¹fun catch f = letcc (absurd o f o letcc o throw) (♂ → (≧ → (≧ → ) ≥ √)()

#### Demo: True or Not True?

```
val weird = fn () =>
let
  val p = K.letcc (fn na => INR (K.catch (K.throw na o
        INL))) : (unit, unit K.cont) Either.either
in
  case p of
     INL () => print "duh, true is true\n"
  | INR k => (print "uhhh what?\n"; K.throw k ())
end
```

#### Conclusion

 Continuations are useful to program with! They let you alter control flow.

Hype for Types Continuations February 10, 2025 20 / 20

#### Conclusion

- Continuations are useful to program with! They let you alter control flow.
- Classical logic doesn't hold much proof content.
